ABSTRACT OF THE DISCLOSURE

The present invention relates to a price
information mediating process for providing selling
price information of at least one product supplier
to at least one user. The process includes the steps
of: receiving product search conditions from the
user; retrieving a normal selling price of a desired
product from storage means in accordance with the
product search condition from the user, the storage
means including normal selling price information
which have been pre-registered by the product
supplier; sending the retrieved normal selling price
to the user; receiving a desired purchasing price
presented by the user; and sending the desired
purchasing price to the product supplier.
